

```
<?php
class ... {
    public $ConnectionManager;

    public function iNeedToMakeAnAsynchronousQuery($conn, $msg){
        $query = new Query(
            "SELECT * FROM posts",
            function($result) use ($conn) {
                //do something with the result and send data to the client...
                //IF the $conn is still valid.
                If ($conn) $conn->send($something);
            }
        );
    }
}
```

**Demo**
