Javascript client

- var exampleSocket = new WebSocket("ws://www.example.com:8100");

- exampleSocket.send("message for server");

- exampleSocket.onmessage = function(event) {console.log(event.data)};

PHP Ratchet-based server

- ☐ **Install Ratchet with composer**

    - ☐ **composer require cboden/ratchet**

- ☐ **Set up a server script that instantiates a Ratchet server.**

- ☐ **Use JSON for messages**

- ☐ **Make a router to dynamically find public methods**
